1 Introduction

1.1 Overview

This guide will cover the processes required to purchase Alvey Chain (wALV) via pancake swap. This guide does not cover the process for purchasing via centralised exchanges. This guide also doesn't cover bridging to ALV, this is covered in ALV-CG-1002 – How to bridge from wALV to ALV.

Although screenshots and processes covered in this guide are shown on PC, the processes remain the same on mobile. Please follow the guidance in you MetaMask or TrustWallet browser.

1.1.1 Role and Responsibilities

It is a users responsibility to do your own research (DYOR). Please do not invest more than you are willing to lose.

2 How to buy wALV

2.1 Connect to Pancake Swap

The first step the user must take is to visit pancakeswap, this can be found at <https://pancakeswap.finance/>.

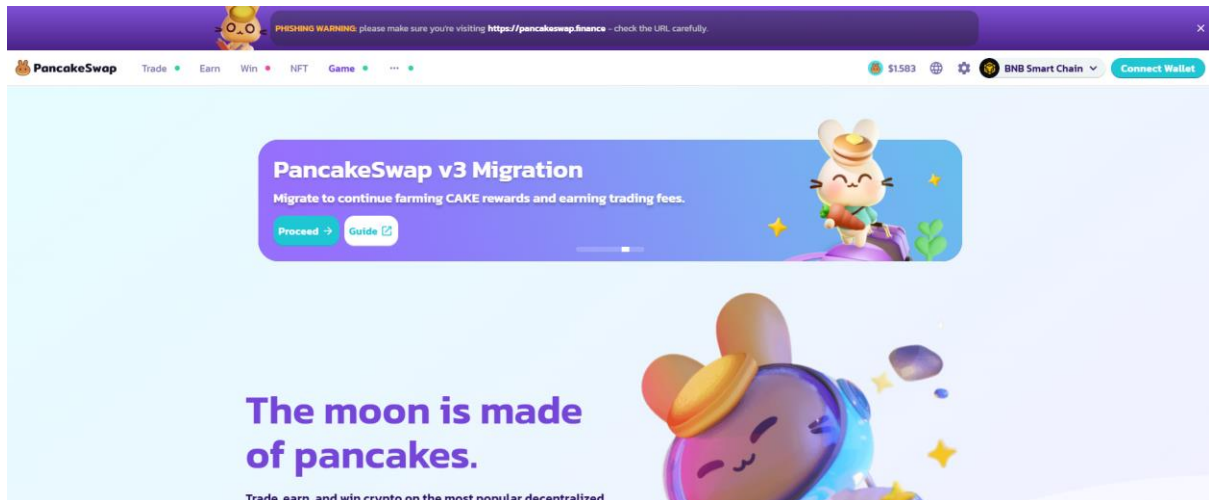

Figure 1: Pancake Swap Home Page

Once on the website, the user must then connect their wallet via the button on the top right hand side of the screen.

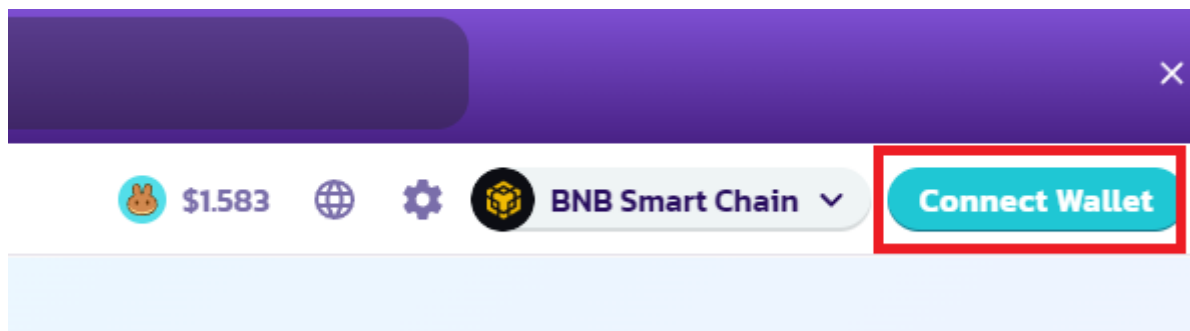

Figure 2: Connect Wallet

Once the user has connected their wallet, they will see their wallet address in the top right hand corner where it previously said "connect wallet". Now the user is connected they can now select "Trade" from the tool bar across the top of the screen.

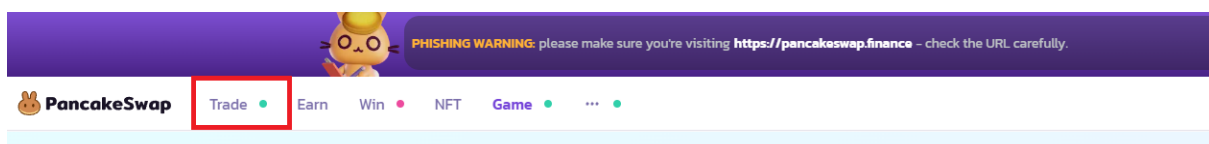

Figure 3: Trade button in tool bar

Now the user is on the trade screen, they will see an option on the right hand side to trade between two different tokens. In this example we will buy wALV using BNB. The user must ensure that BNB is the token selected in the top box, they must then add Alvey Chain (wALV) in the bottom box. It is advised to search by contract address to ensure you are interacting with the correct contract, as this is a Decentralised Exchange, it is possible bad actors could create fake contracts under any name. Please ensure you take the contract address from official sources only. The wALV address is **0x256D1fCE1b1221e8398f65F9B36033CE50B2D497**.

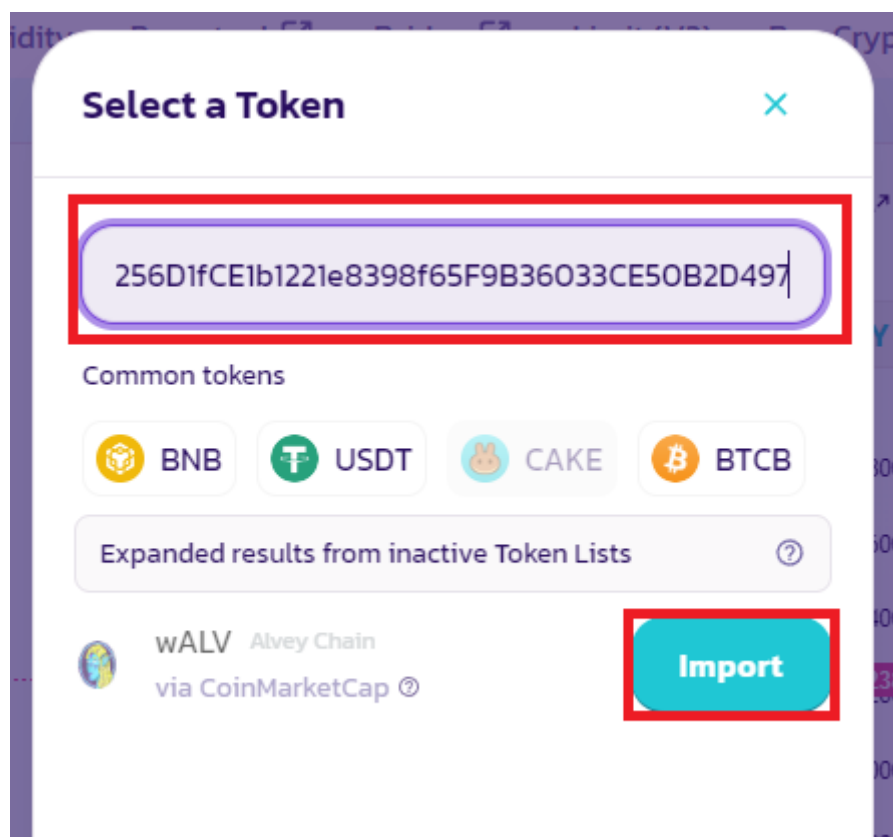

Figure 4: Search by contract and import button

Once the user has searched by contract, the user must then select "import". The user will now see BNB in the top trade box and Alvey Chain (wALV) in the bottom trade box. The user must then enter the amount of BNB they wish to trade in the top box, or the amount of Alvey Chain (wALV) they wish to trade in the bottom box. It is also recommended to select a slippage tolerance of <0.5%, this will avoid the user being front run, particularly when buying large amounts.

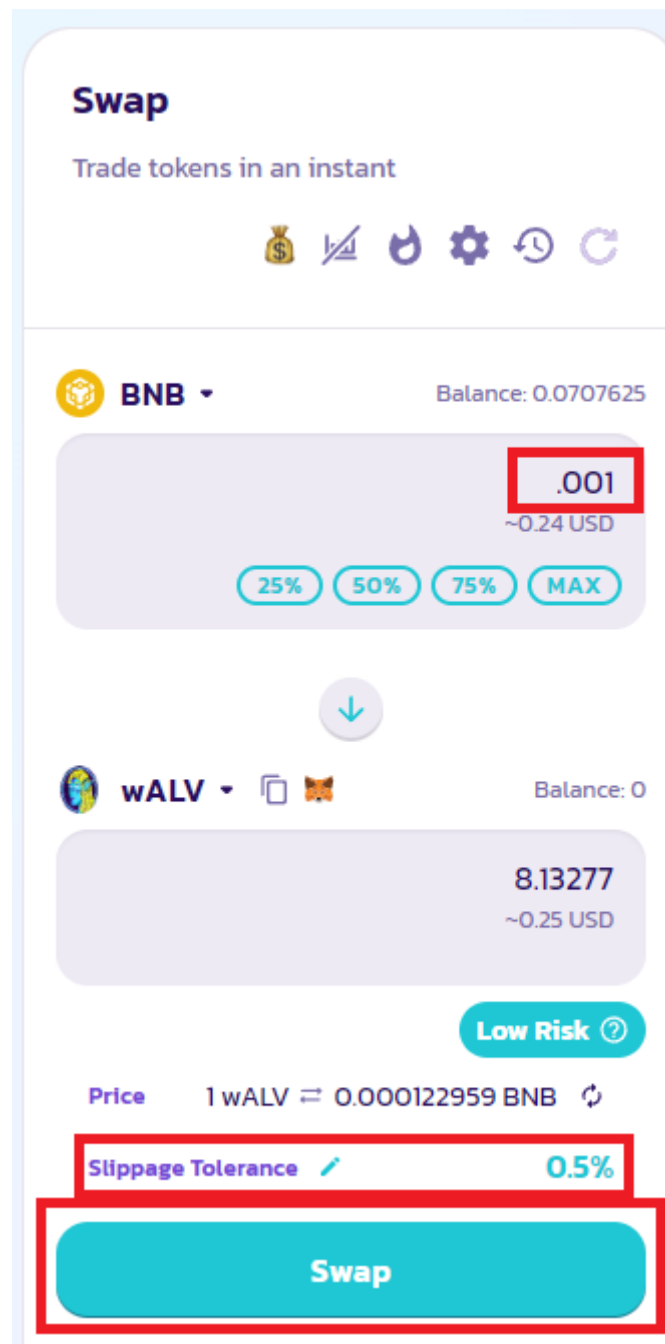

Figure 5: Select amount you want to trade, slippage and trade button

Once the user has selected the amount they wish to trade and selected their slippage tolerance, they are now ready to trade, the user does this by selecting the "Swap" button as shown in figure 5. You will then be asked to confirm this trade within your wallet and given the option to add Alvey Chain to your wallet.
